

## **Nobili: efficiency on energetic domain**

During the convention "Energetic efficiency: opportunity and commitment for economic world through Microkyoto project" – held on 18th June 2010 - Nobili company commitment, towards environmental and energetic saving, was awarded with a plate to Mr. Mario Rossi – President of Nobili Company.

The company – actually – has since ever brought great attention towards energetic saving and renewable energies exploitation.

Thanks to MycroKyoto Imprese (MycroKyoto Enterprises), to which Nobili Company has joined through Unindustria (Enterprises association), has received a qualified technical intervention financed by Provincia di Bologna (Bologna district), obtaining an overall image of its own processes to determine strong points and improvement features, which most of them have been already put into practice after few months.
